

## Chemistry 11 LEWIS DOT STRUCTURES

Lewis DOT Structures of **IONIC** compounds are easy to construct: *metal + non-metal*.  
HERE ARE THE RULES:

1. determine the charge on the ionic species
2. arrange the ions "symmetrically"

**Example 1.** Draw the Lewis Structure of  $MgCl_2$ . ← 1 Mg 2 Cl

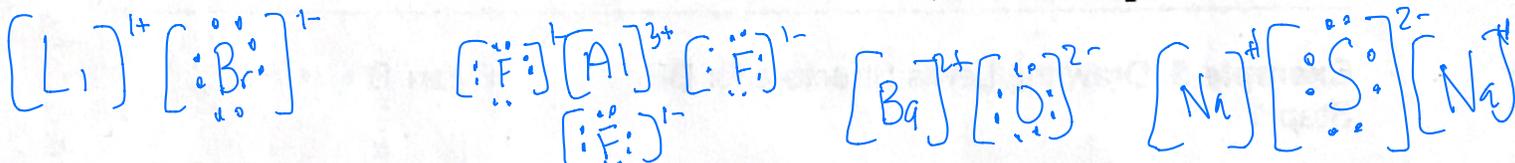

Step 1.  $Mg^{2+}$   $2Cl^{-}$

# 85  
PG  
183

**Example 2.** Draw the Lewis Structure for each of the following compounds:

a.  $LiBr$   $Li^{+} Br^{-}$     b.  $AlF_3$   $Al^{3+} 3F^{-}$     c.  $BaO$  ←  $Ba^{2+} O^{2-}$     d.  $Na_2S$   $2Na^{+} S^{2-}$

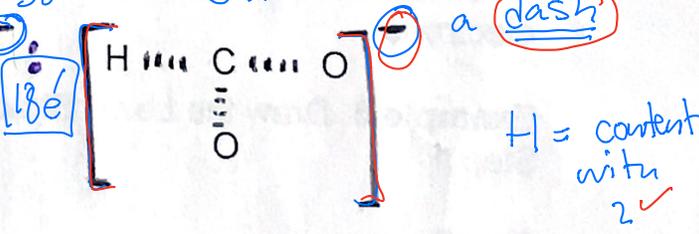

Lewis DOT Structures of **COVALENT** compounds are somewhat more difficult to construct: HERE ARE THE RULES FOR THOSE THAT OBEY THE OCTET RULE

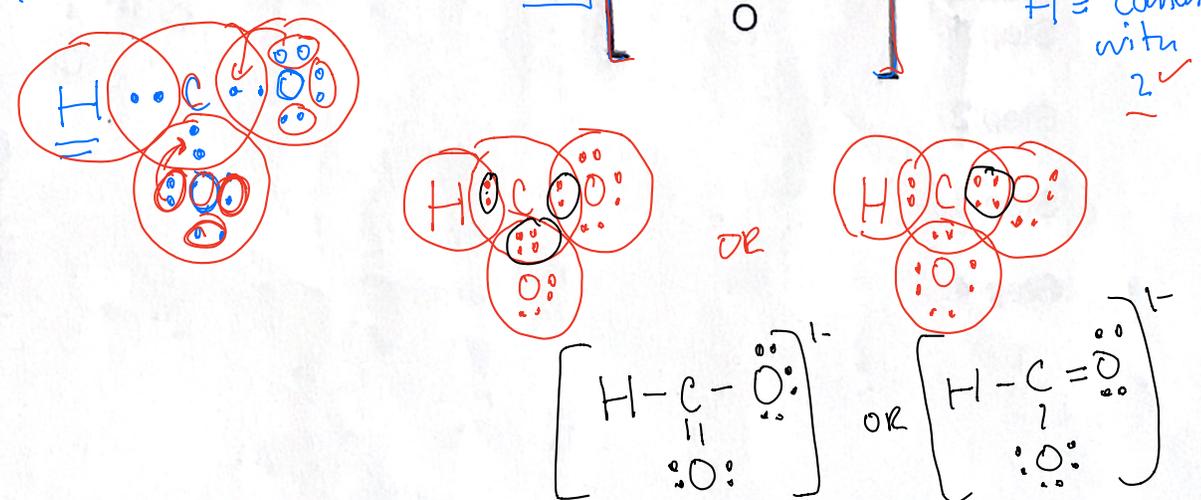

- ① count up the number of valence electrons brought in by each atom (adjust if it is a polyatomic ion)
  - ② place 2 electrons between each connected atom (bond)
  - ③ distribute "octets" to atoms starting with "outside" atoms first
  - ④ if "central" atoms have less than an octet
  5. Create multiple bonds (double or triple)
- ← tidy up your structure so that shared electrons are a dash

**Example 3.** Draw the Lewis Structure for  $CHO_2^{-}$

Step 1. 1 H = 1, 1 C = 4, 2 O = 12, 1 e<sup>-</sup> = 18 e<sup>-</sup>

- Step 2.  
Step 3.  
Step 4.  
Step 5.

**Example 4.** Draw the Lewis Structure for HOPO :

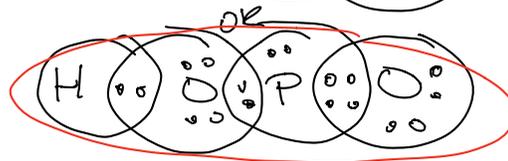

Step 1. 1 H = 1e 1 P = 5e 2 O = 12e = 18e

Step 2.

Step 3.

Step 4.

Step 5.

Ex 1 + 2

**COVALENT compounds that VIOLATE the OCTET RULE**

A. In addition to \_\_\_\_\_, the atoms \_\_\_\_\_, \_\_\_\_\_ and \_\_\_\_\_ are exceptions as they have \_\_\_\_\_ than a full octet when they form covalent compounds.

→ These atoms tend to \_\_\_\_\_

**Example 5.** Draw the Lewis Structure for BF<sub>3</sub>:

Step 1.

Step 2.

Step 3.

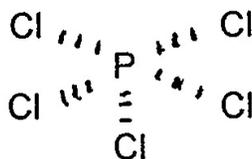

Step 4.

Step 5.

B. Elements in the \_\_\_\_\_ and \_\_\_\_\_ periods of the periodic table frequently attain \_\_\_\_\_ than a full octet when they form covalent compounds.

→ Therefore, the central atom will end up with \_\_\_\_\_ than eight valence electrons

**Example 6.** Draw the Lewis Structure for PCl<sub>5</sub> :

Step 1.

Step 2.

Step 3.

Step 4.
